Road Traffic Injury Prevention Training Manual

Dinesh Mohan, Indian Institute of Technology, Delhi, 2006 Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.
The Gift Relationship (Reissue) Titmuss, Richard, 2019-09-01 Richard Titmuss (1907-1973) was a pioneer in the field of social administration (now social policy). In this reissued classic, listed by the New York Times as one of the 10 most important books of the year when it was first published in 1970, he compares blood donation in the US and UK, contrasting the British system of reliance on voluntary donors to the American one in which the blood supply is in the hands of for-profit enterprises, concluding that a system based on altruism is both safer and more economically efficient. Titmuss’s argument about how altruism binds societies together has proved a powerful tool in the analysis of welfare provision. His analysis is even more topical now in an age of ever changing health care policy and at a time when health and welfare systems are under sustained attack from many quarters.

The Naked Earl Sally MacKenzie, 2007 In this rollicking Regency romance, a naked earl flees from a woman bent on trapping him into marriage and winds up in the bed of an alluringly beautiful lady. Original.

Basic Histology Luiz Carlos Uchôa Junqueira, José Carneiro, 2003 This book emphasizes the relationships and concepts that link cell and tissue structures with their functions. It begins with a description of the structure and function of cells, then presents the four basic tissues of the body, and concludes with individual chapters on each organ and organ system. Cell biology is emphasized as the most fundamental approach to the understanding of structure and function. An image library CD-ROM also includes the halftones and line art illustrations in the book. The image library would function as an atlas to the text.

**Transfusion in the Intensive Care Unit** Nicole P. Juffermans, Timothy S. Walsh, 2014-09-30 Due to a high incidence of anemia, critically ill patients are frequently transfused, with up to 40% of patients receiving a transfusion during their stay in the Intensive Care Unit. It has become increasingly clear that there is an association between transfusion and adverse outcomes, underlining the need for a careful assessment of the risks and benefits of a blood transfusion. In the last decade, there have been several large clinical trials that have studied red blood cell transfusion triggers in various ICU patient populations, allowing us to take a personalized approach to transfusion. Moreover, ICU patients often suffer from coagulopathy. Recent studies have addressed the effectiveness of fresh frozen plasma and platelets to prevent or treat bleeding. Aiming at a personalized therapy approach in transfusion practice, this book is the first to offer a comprehensive summary of transfusion triggers for red blood cells in specific ICU patient populations and specific conditions. In addition, it discusses evidence for triggers for plasma and platelets and outlines the most common adverse effects of transfusion in the ICU. *Transfusion in the Intensive Care Unit* is a practical handbook that can be used in everyday practice to guide transfusion and thus will serve as a valuable resource for physicians, fellows and residents working in Intensive Care, Anesthesiology and Cardiac Surgery.
